Professional Summary

Senior Backend Engineer with 10+ years of experience in systems integration, event-driven architecture on Amazon Web Services (AWS), and financial business logic. At Spin Premia, FEMSA's coalition loyalty program, I designed the core transaction flow (38M+ users and ~2M daily transactions) and cut response times from 5–7 seconds to under 1 second. A credit system I built has been running in production for the same client for more than 8 years. I use AI in my development workflow every day (Claude Code, agents, MCP, RAG). B.S. in Computer Systems Engineering, licensed professional.

Technical Skills

- **Languages:** PHP, JavaScript, TypeScript, Python, SQL, Ruby on Rails
- **Backend & Integration:** Node.js, Express.js, NestJS, Laravel, REST APIs, API Gateway, Apigee, Serverless Framework, SAP integration (XML), Openpay, multi-tenant architecture
- **Events & Data:** Event-Driven Architecture, Domain-Driven Design (DDD), Apache Kafka, Amazon EventBridge, Amazon SQS, Amazon DynamoDB, PostgreSQL, MySQL, MongoDB, Redis
- **Cloud & DevOps:** Amazon Web Services (AWS): Lambda, S3, CloudFront, EC2, RDS; Docker, GitHub Actions, CI/CD, Traefik, Nginx, Linux
- **Frontend:** Vue.js, Vuex, Pinia, Nuxt.js, Next.js, React, Tailwind CSS
- **Quality & Observability:** Test-Driven Development (TDD), unit, integration, and End-to-End (E2E) testing, Vitest, Playwright, SonarQube, Snyk, Datadog, Amazon CloudWatch, code review
- **Applied AI:** Claude Code, GitHub Copilot, AI agents, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), OpenAI API, n8n, spec-driven development
- **Methodologies:** Scrum, Kanban, Jira, Confluence

Professional Experience

Senior Backend Engineer · Spin Premia

Remote · Jul 2022 – Jun 2026

FEMSA's coalition loyalty program, serving 38M+ users and processing ~2M daily transactions at OXXO stores.

- Designed and built the core transaction flow in Apigee: point-of-sale authentication, risk scoring through an anti-fraud engine, and integration with the loyalty engine.
- Wrote the anti-fraud decision logic in JavaScript along with reusable SharedFlows; suspicious transactions are rejected in real time, helping mitigate 97% of fraud losses.
- Cut endpoint response times from 5–7 seconds to under 1 second by leveraging Apigee caching.
- Migrated synchronous processes to an event-driven architecture in 2 months using feature flags: AWS Lambda, Amazon EventBridge, Apache Kafka, Amazon DynamoDB, and Python consumers.
- Built campaign points budget control in Python and Amazon DynamoDB, with event-driven alerts at 90% and 95% consumption.
- Built Node.js and TypeScript services connected to Apigee, including a card check-digit validator that blocks invalid requests.
- Built Datadog dashboards and traces and analyzed Amazon CloudWatch logs to pinpoint failures across the flow; took part in production on-call rotations, code reviews, and architecture proposals within a team of 4 senior backend engineers.

Founder & Senior Software Engineer · Carvaz

Remote · Jan 2015 – Present

Custom software studio building client solutions and in-house products for small and medium-sized businesses in Mexico and Latin America.

- Built and maintain the point-of-sale and credit system for CFMarro (hardware store), in production for more than 8 years: multi-branch with real-time inventory, credit accounts with interest on principal and payment agreements that freeze the outstanding balance for collection in installments, ESC/POS thermal printing, and asynchronous exports using Redis queues (PHP, Laravel, Vue.js, MySQL, Redis, Docker).
- Develop in-house products: Mexican voter ID (INE) data extraction with OpenAI GPT-4o Vision and OCR (RentableSoft), payroll with per-barber commissions and branch-level pricing (Barber Agenda), and an adventure travel marketplace (unViajecito), built with Nuxt.js, Next.js, and MongoDB.
- Run my own infrastructure: a VPS hosting 6 applications on Docker Compose, Traefik with automatic HTTPS, and CI/CD with GitHub Actions for every application.

- AI-assisted development: spec-driven and harness development with Claude Code, using a team of agents with different models assigned by role to optimize token costs; RAG-powered agents built with n8n and the OpenAI API that handle WhatsApp conversations.

Senior Full-stack Developer · Consiss

Monterrey, hybrid · Aug 2020 – Jul 2022

Software development consultancy. Reported directly to the CTO and managed up to 3 concurrent projects using Laravel, PHP, Vue.js, Docker, and AWS.

- Served as technical lead for Whirlpool's multi-brand project (Whirlpool, Acros, Maytag, KitchenAid): owned the architecture and development, and led meetings with the client's PMs, solution architects, and security team.
- Built a Vue.js and TypeScript widget embedded in the WordPress sites of 4 brands for scheduling technician visits nationwide.
- Developed the serverless backend: Express.js on AWS Lambda behind API Gateway, with Amazon CloudWatch logging, Amazon DynamoDB, and XML-based SAP integration; delivery through Amazon S3 and CloudFront, configured with Serverless Framework.
- Coordinated a QA engineer and a frontend specialist, introduced TDD on my projects, and ran Git training sessions for the team.
- Reduced infrastructure costs by more than 80% by redesigning the development and QA environments: eliminated redundant VPS servers and centralized configuration with Traefik and Nginx.

Full-stack Developer · BarPresto

Monterrey · Sep 2019 – Jul 2020

- Developed the Laravel REST API powering the Android and iOS mobile apps for bar bottle inventory.
- Operated the multi-tenant architecture (one database per client) and migrated queries from Eloquent to Query Builder to reduce database load.
- Added reporting, roles, and permissions to the web portal (Laravel, MySQL, Docker, Portainer).

Full-stack Developer & DevOps · Wirewatt

San Pedro Garza García · Apr 2019 – Sep 2019

Fintech providing financing for solar panel purchases.

- Rescued a Laravel credit system handed over as nothing more than a .zip file: set up the repository, AWS (EC2, RDS), and a VPS, then continued its development as the sole developer and IT lead.
- Built the amortization schedule and late-interest calculation, with recalculation for late payments, extensions, and debt forgiveness.
- Integrated Openpay end to end: card payments, direct debit, and recurring payments.

Earlier Experience

- **Full-stack Developer · Connect It**, Monterrey · Jul 2018 – Apr 2019: LoopBack (Node.js), Vue.js, and PHP.
- **Web Developer · PCEL**, Monterrey · Jan 2018 – Jul 2018: e-commerce store and internal systems with PHP and Laravel.
- **Software Developer & Consultant · Trazzos.com**, Tuxtla Gutiérrez · Mar 2014 – Feb 2015: PHP, MySQL, JavaScript, and PrestaShop.
- **Manager · Coppel:** built and trained teams and set sales targets.

Education

B.S. in Computer Systems Engineering · Instituto Tecnológico de Tapachula · 2005 – 2010. Degree completed, with a federally issued professional license (cédula profesional).

Courses

- Serverless with AWS and Serverless Framework · Udemy · 2025
- n8n + MCP: Automation and AI Agents · Udemy · 2025
- Complete n8n: AI Agents and Workflow Automation · Udemy · 2025
- SOLID Principles and Clean Code · Udemy · 2025
- Getting Started with Docker Containers · Udemy · 2023
